

C28P1312000**C28P1312000**

C28 is a mechanical thermostat conceived for the control of equipments with strong electric intensities (heating plates, resistances of washer, electric convectors, etc.). C28 possesses a relay SPDT of which a contact for inverse share (share in the increase).

- standard Assembly or with stirrup
- Capillary from 60 to 150 cms and various types of bulb according to the points of order
- Regulation of the point of order of 0 in 320°C according to the models
- Differential of 2 in 8°C settled by factory according to the width of the beach of regulation of the point of order

Technical data:

- Connections Faston 6,3mm
- to Be able to of standard cut: 16A in 380V
